

## **Cervical Arterial Dysfunction and Testing: Evening Workshop**

Date	Venue	Tutor
We have delayed the start of these sessions until after the summer holidays.		Roger Kerry

These workshops with Roger Kerry will present a concise summary of the literature on cervical arterial dysfunction in relation to manual therapy of the cervical spine, including vertebrobasilar insufficiency. It will raise important issues for discussion and present a proposed revised approach to the assessment of cervical arterial dysfunction. Theory will be closely tied into case examples to contextualise the information. Roger will then follow this up with the practical aspects on testing procedure which will also include cranial nerve testing.

These workshops are essential for any professional involved in the assessment and management of patients with cervical spine pain.

Roger Kerry is a Lecturer in Physiotherapy Education at the University of Nottingham. His clinical and research interests include haemodynamics, manual therapy, clinical reasoning, and education. He has published and presented internationally in the subjects of haemodynamics and manual therapy. Over the past two years, Roger has lead an international team of experts through a review of literature and development of an assessment framework for cervical arterial dysfunction.
